

Module 15: GUI

Objective: Handling the GUI and its elements

System requirements: .NET 5.0

Tools: Visual Studio 2019

Duration: ~30min

Author: Klaas Hagge

Last change: 08.11.2021

1 New project

The goal of this lab is to create a graphical user interface for our car park.

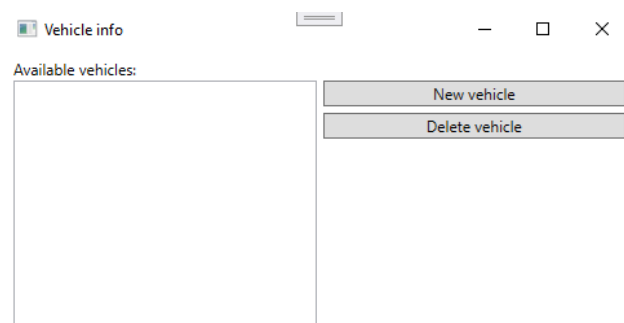

1. First create a new project with the Windows Forms – Template
2. Add the car park project to the dependencies to get access to the classes created in the previous exercises.
 - a. Right click on the dependencies folder of the WinForms project in the project explorer and click on 'Add new project reference'.
 - b. Select the car park project from the list and confirm

2 Create the GUI

Create a GUI based on this model:

In total you need:

- A ListBox
- Two labels (above and below the ListBox)
- Two Buttons

3 Implement the functions

The GUI should support the following functions. Write them in the code-behind and link them to the appropriate events.

1. Creation of a new vehicle. Use the random function known from the previous exercises. All created vehicles should be displayed in the ListBox.
2. Delete a vehicle marked in the ListBox. Check if a vehicle was selected in the ListBox.
3. Display the Info() method of a selected vehicle in the lower label.
