

Module 16: Files and directories

Objective: Implement a memory/serialization and load/deserialization method.

System requirements: .Net 5.0

Tools: Visual Studio

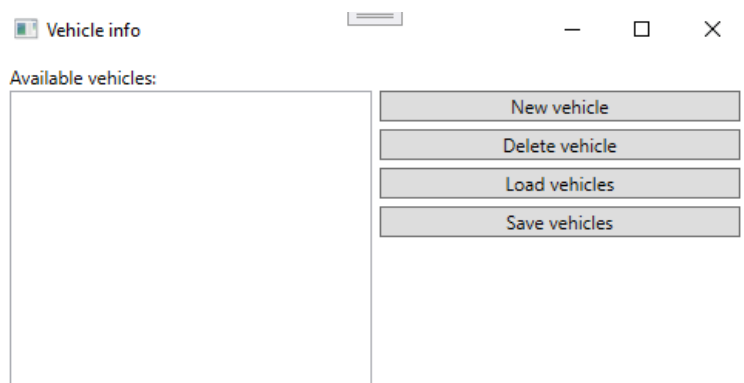

Duration: ~30min

Author: Klaas Hagge

Last change: 15.11.2021

1 Extension of the vehicle GUI

The goal of this exercise is to add two functions to the GUI program from the previous exercise. First, add two new buttons to the GUI, as shown here:

2 Logic of the EventHandler

Now write the EventHandler for the two buttons:

1. 'Save vehicles' should let the user choose a location and save all vehicles from the ListBox serialized as a txt file. Choose the type of serialization yourself.
2. 'Load Vehicles' shall let the user choose a txt file and deserialize it if it has the right format. The loaded vehicles should replace the vehicles in the ListBox
